- https://cloud.google.com/maps-platform/terms?e=48754805&hl=en

The following terms apply to Line-Item #1 of this Quote:

1. Additional Definitions.
   A. "Customer Usage Environment" means the subaccount, domain, and/or customer organization ID associated with the Relevant Customer's usage of the Qualifying SKUs.
   B. "GCP Services" means: (1) Google Cloud Platform Pay-As-You-Go SKUs; and (2) the Separately Provisioned GCP Offerings
      a. "Google Cloud Platform Pay-As-You-Go SKUs" are the Google Cloud Platform SKUs listed at https://cloud.google.com/skus, excluding Google Cloud Platform Services or SKUs that require the acceptance of separate terms and conditions (e.g. Google Cloud Security Command Center);
      b. "Separately Provisioned GCP Offerings" are the following offerings:
         i. GCP Enhanced Support
         ii. Security Command Center Premium
         iii. GCP Assured Workloads
         iv. Google Maps Platform Core Services
   C. "Google Cloud SKU" means the SKUs associated with any product or service that Google Cloud makes available to customers.
   D. "Relevant Product Category" means the below Relevant Product Categories included in the GCP Subscription SKU
      a. Google Cloud Platform Pay-As-You-Go SKUs
      b. GCP Enhanced Support
      c. Security Command Center Premium
      d. GCP Assured Workloads
      e. Google Maps Platform Core Services
   E. "Google Maps Platform Core Services ("GMP Services")" means the Google Maps Platform SKUs listed at g.co/maps/pricelist, excluding Google Maps Platform Services or SKUs that require the acceptance of separate terms and conditions.
   F. "Implementation Date" means a Google-selected date that is no later than five business days after the Agreement Effective Date.
   G. "Marketplace Offerings" means eligible software, service, or datasets provided by third party vendors on Google Cloud Marketplace (https://console.cloud.google.com/marketplace/) and made available for Customer to purchase from Google, in each case excluding BYOL Products. For the avoidance of doubt, Google Products are not included in "Marketplace Offerings."

H. "Permitted Units" means the specific SKUs, products or quantities of a Relevant Product Category that is included in the Subscription Fee. The Permitted Units are specified in the Qualifying Workload, if applicable to the Relevant Product Category.
I. "Qualifying SKUs" means the products, quantities or SKUs that are described in the Qualifying Workload.
J. "Qualifying Workload" means the project approved by Google for Customer to use the Qualifying SKUs.
K. "Relevant Customer" means the Customer whose Service usage is linked to the Subaccount as of the Agreement Effective Date.
L. "Subscription Period" means the term starting on the Implementation Date and continuing for twelve (12) months.

2. Additional Terms

A. Restrictions. Customer will not allow any use under the Subaccount of: (i) any Google Cloud SKU that is not a Qualifying SKU; (ii) any Qualifying SKU for any purpose other than to implement the Qualifying Workload; or (iii) any Qualifying SKU in violation of applicable restrictions specified in the Qualifying Workload (each, an "Unqualified Use"). Any Unqualified Use is not permitted under this Agreement and is subject to Sections C, D and E below.
B. Marketplace Offerings. Marketplace Offerings are not included in the Qualifying SKUs or Subscription Fee. Any purchase or use of a Marketplace Offering under this Agreement will be deemed an Unqualified Use and is subject to Sections C, D and E below. In addition, Carahsoft may, in its sole discretion, unilaterally cancel any Marketplace order associated with the Subaccount.
C. Carahsoft reserves the right to review usage associated with the Customer Usage Environment at any time for any Unqualified Use or non-compliance with the terms of this Agreement. Google and/or Carahsoft will notify Customer of any Unqualified Use ("Discrepancy").
D. If Customer, within 15 days of receiving notice of the Discrepancy, does not conform the actual use of Google Cloud Services under the Customer Usage Environment according to this Agreement, then:
    i. if, as a result of the Discrepancy, the fees charged by Carahsoft to Customer were lower than what would otherwise have been charged, Carahsoft will invoice Customer for, and Customer will pay, an amount equal to such deficiency in Fees based on Google's standard pricing; and
    ii. if Customer: (a) requires the use of Google Cloud SKUs under the Customer Usage Environment other than Qualifying SKUs in order to implement the Qualifying Workload; or (b) requires an amendment to the scope of the Qualifying Workload, then the parties will, subject to Carahsoft's approval, amend or replace this Agreement to reflect Customer's requirements and the corresponding higher subscription fee(s) for the remainder of the Subscription Period.
E. Any other Unqualified Use will be subject to additional Fees based on Google's standard pricing for the applicable SKU or product that is considered an Unqualified Use.
F. Post Subscription Period. If Customer continues to use Google Cloud Platform Pay-AsYou-Go SKUs under the Subaccount after the Subscription Period, Carahsoft will invoice

Customer based upon list price of actual GCP usage, unless the parties enter into a new Agreement to reflect a new subscription before the end of the Subscription Period. For all other Relevant Product Categories, the services will terminate at the end of the final Subscription Period.

G. Suspension for Google Maps Platform Core Services. At any time during the Subscription Period, Customer may cease use of the Google Maps Platform Core Services at any time.

H. Partner Funds

A. "PF Partner" means a Google-authorized entity participating in Google's Partner Funding Program and with which Relevant Customer has a services agreement. For clarity, a PF Partner may be a third-party entity authorized by Google under the Partner Funding Program.

B. "Partner Services" means project management, implementation, customization, change management, training, configuration, IT environment assessment, or data migration services provided by PF Partner for Relevant Customer's implementation and/or deployment of the applicable Google services. For clarity, proof of concept, pilots, and workshops are not eligible services.

C. "Partner Funding Program" means the Google-sponsored program under which Google makes available funds to defray costs incurred for qualifying Partner Services.

D. If Partner Services qualify for funding under the Partner Funding Program (including Google's pre-approval of an applicable statement of work by the PF Partner), Google will pay the PF Partner, inclusive of Taxes, up to the amount specified below ("Partner Funds") to be used by PF Partner during the period(s) specified in the "Applicable Period" column below for the provision of Partner Services to Relevant Customer (no payment will be made to Relevant Customer), provided that: (A) the PF Partner and Partner Services satisfy all terms for funds payout under the Partner Funding Program, and (B) Relevant Customer: (i) accepts the Partner Services during the period specified below, unless Google or Carahsoft extends such period in writing; and (ii) upon Google's request, confirms in writing that the Partner Services have been completed. Relevant Customer (not Google or Carahsoft) is solely responsible for any amounts owed to PF Partner for the Partner Services in excess of the amount specified. Google and Carahsoft accept no liability or responsibility for the Partner Services or any other work performed by PF Partner. For clarity, any unused Partner Funds will expire if not used within the corresponding Applicable Period.

Partner Funds	Applicable Period	Relevant Product Category	Amount

Partner Fund 1.00	The first 12.00 months after the Implementation Date ("Partner Fund 1.00 Duration")	Google Cloud Platform	USD 200,000.00

3. Qualifying Workload

The following services may be used to implement the Project (defined below) during the Subscription Period:

1. The Google Cloud Platform Pay-As-You-Go SKUs (excluding the SKUs listed below), subject to the Restrictions.
2. The Google Maps Platform Core services, subject to the Restrictions.'
3. The Security Command Center Premium services, subject to the Restrictions.
4. The Apigee (Offline Subscription-Based), subject to the Restrictions.
5. The Google Cloud Platform Premium Support services, subject to the Restrictions.
6. The Google Cloud Platform Assured Workloads services, subject to the Restrictions.

"Project" means the development and deployment of the VISION application as a Comprehensive Child Welfare Information System (CCWIS) as part of the modernization of the FACs and JARVIS applications. This scope will also include the technology required for a mainframe migration assessment.

"Restrictions" means the following restrictions or assumptions applicable to the Project:

1. GCP Pay-As-You-Go
2. Native GCP products for the purpose of mainframe migration assessments are permitted.
3. Hosting of any migrated mainframe systems (including non-production) is excluded from this workload.
4. Apigee pay-as-you-go SKUs are permitted.
5. The use of Accelerators (GPUs, TPUs) is not permitted.
6. Google Maps Platform Core Services
7. Google Maps Platform Core Services are included
8. Security Command Center Premium
9. Security Command Center Premium is included
10. SKU: 116E-4C1B-94B7
11. Apigee (Offline Subscription-Based)
12. Apigee is included
13. Apigee Standard Subscription SKU:
14. **APGEXSTAND2**
15. Restrictions for Apigee X Standard subscription:
16. Up to 1.25B Standard API Proxy calls or 250M Extensible API Proxy calls
17. Three environments

18. 250 deployments of API proxies/shared flows
19. Up to 250M API calls for Analytics with 14 months of data retention 20. Up to 99% SLA

1. Google Cloud Platform Premium Support
2. Google Cloud Platform Premium Support is included
3. Minimum Fee SKU: SUPPORT-GCP-PREMIUM-MINIMUM
4. Variable SKU: SUPPORT-GCP-PREMIUM-VARIABLE
5. Google Cloud Platform Assured Workloads
6. Google Cloud Platform Assured Workloads is included
7. SKU: Assured Workloads - CP-AW-1Y ; Assured Support - SUPPORT-GCPASSURED

8. Utilization Cap. Utilization of the Google Cloud Platform Pay-As-You-Go SKUs and Google Maps Platform Core Services under the Subaccount during the Subscription Period will not exceed in the aggregate $1,400,000 USD based on Google's then-current list price, minus any discounts applied to the Subaccount ("Utilization Cap"). Upon reaching the Utilization Cap at any time during the Subscription Period, any unpaid portion of the Total Subscription Fees (listed in Quote 61351375) shall become due and the parties shall work in good faith to negotiate and execute a new subscription agreement. If the parties fail to reach agreement on a new subscription within 30 days of exceeding the Utilization Cap, Carahsoft may, in its sole discretion, terminate the Agreement. Carahsoft will invoice Customer for the remaining unpaid portion of the Total Subscription Fees, and Customer will pay the invoiced amount in accordance with the payment terms in the Agreement. The Post Subscription Period section of the Agreement shall apply upon such termination. Carahsoft does not waive its right to claim payment for any unpaid portion of the Total Subscription Fees by not exercising or delaying the exercise of any rights under this Section.

The Qualifying SKUs do not include:
(i) any SKUs for:
1. Appsheet;
2. Looker;
3. Chronicle;
4. Google Cloud VMware Engine;
5. Chrome Enterprise Premium (also referred to as BeyondCorp Enterprise);
6. Google Workspace;
7. Marketplace Offerings;
8. ReCaptcha Enterprise (subscription);
9. Siemplify;
10. GCP products that require separate subscriptions; 11. Bare Metal Solution; and ii) any third party solutions used by the Relevant Customer, in connection with the Project.

4. Additional Product Terms

1. GCP Assured Workloads Premium Subscription A. Additional Definitions.

a. "Assured Workload Documentation" means the Google documentation (as it may be updated from time to time) in the form generally made available by Google for use with the Assured Workload Services at https://cloud.google.com/assured-workloads/docs.

b. "Organization" has the meaning given to it in the Documentation.

c. "Subscription SKU" means the Google Cloud Platform's Assured Workload Services described in the Qualifying Workload. **B. Additional Terms**.

a. Service Enablement and Access Restrictions. **Assured Workload Services are designed to operate at an Organization level and must not be enabled in any Organization used by multiple Customers or by third parties without proper authorization.** Assured Workload Services is subject to the following conditions being met:

i. Relevant Customer must be the sole owner of the Organization in which Assured Workload Services will be enabled or configured ("Relevant Org");

ii. the Relevant Org must only be shared with, or made accessible to, those third parties expressly authorized by Relevant Customer who have consented in writing to their workloads being accessed by:

1. Relevant Customer;

2. any other third parties authorized by Relevant Customer who have consented in writing to their workloads being accessed as described in this subsection; and

iii. For clarity, where the Relevant Org is shared with, or made accessible to, any party other than Relevant Customer in accordance with this Section, any use of the Services provided under this Agreement will be regarded as usage by Relevant Customer.

b. Quarterly AW Report. Customer must submit a written report to Carahsoft by no later than 30 days after the end of each calendar quarter (the "Quarterly Report") that contains an accurate and complete list of all Organizations for which Customer has enabled Assured Workload Services in the immediately preceding calendar quarter. Each Quarterly Report must be signed by a duly-authorized Customer representative and certify that:

i. none of the listed Organizations is being used in breach of these terms; and

c. Audit and Compliance. Carahsoft may audit Customer's certification of any Quarterly Report or compliance with the terms and conditions of this Agreement or any Assured Workload Documentation. Customer will promptly take any corrective actions reasonably requested by Carahsoft with respect to any breach of such terms or conditions (without prejudice to Carahsoft's other rights and remedies).

d. Revocation, Suspension and Termination. If Customer fails to submit the Quarterly Report to Carahsoft by the applicable due date, or if Carahsoft reasonably determines that that Customer is breaching any of the terms or conditions of this Agreement or any Assured Workload Documentation, then Carahsoft in its discretion may (and without prejudice to any other rights or remedies):

i. suspend provision of any or all Assured Workload Services to Customer. ii. terminate the Agreement, on the grounds that Customer has committed an incurable material breach.

e. Limited Liability. Carahsoft will not have any liability arising out of or relating to Carahsoft's exercise of its rights described in the subsection titled "Revocation, Suspension and Termination."

2. Security Command Center Premium Subscription

A. **Additional Definitions.**

i. "Folder" has the meaning as described in the Documentation.

ii. "Organization" has the meaning given to it in the Documentation.

iii. "Security Command Center Documentation" means the Google documentation (as it may be updated from time to time) in the form generally made available by Google for use with the Security Command Center Services at https://cloud.google.com/security-command-center/docs. Customer must comply with Security Command Center Documentation.

iv. "Subscription SKU" means the Google Cloud Platform's Security Command Center Premium Services described in the Qualifying Workload.

B. **Additional Terms.**

i. Service Enablement and Access Restrictions. **Security Command Center Premium Services are designed to operate at the Organization level. By default, all enabled Security Command Center Premium Services run scans for all supported resources in the Organization. Therefore, Google advises Customer against enabling Security Command Center in any Organization used by multiple Customers or by third parties.**

C. Audit and Compliance. Carahsoft may audit Customer's compliance with the terms and conditions of this Agreement or any Security Command Center Documentation. Customer will promptly take any corrective actions reasonably requested by Carahsoft with respect to any breach of such terms or conditions (without prejudice to Carahsoft's other rights and remedies).

D. Revocation, Suspension and Termination. If Carahsoft reasonably determines that that

Customer is breaching any of the terms or conditions of this Agreement or any Security Command Center Documentation, then Carahsoft in its discretion may (and without prejudice to any other rights or remedies):

i. suspend provision of any or all Security Command Center Premium Services to Customer.

ii. terminate the Agreement, on the grounds that Customer has committed an incurable material breach.

E. Limited Liability. Carahsoft will not have any liability arising out of or relating to Carahsoft's exercise of its rights described in the subsection titled "Revocation, Suspension and Termination."

The following terms and incorporated Statement of Work apply to Line-Item #2 of this Quote:

For Implementation Services This Quote is entered into by Carahsoft Technology Corporation ("Carahsoft") and the State of Iowa Department of Management ("DOM") and is issued under the Google Implementation Services Schedule to the Google Cloud Master Agreement (the "Agreement"). Terms defined in the Agreement apply to this Quote.

Definitions

1. "DOM" means the State of Iowa Department of Management and, unless the context clearly indicates otherwise, any independent contractors, consultants, or other third parties (including other governmental entities) who are retained, hired, or utilized by DOM in furtherance of this Quote.
2. "Purchasing Entity" means the governmental entity that signs a Purchasing Instrument and, unless the context clearly indicates otherwise, any independent contractors, consultants, or other third parties who are retained, hired, or utilized by the Purchasing Entity in furtherance of the Purchasing Instrument or this Agreement.
3. "Purchasing Instrument" means an individual transactional document executed hereunder for the purchase of Deliverable(s) pursuant to this Agreement, regardless of form, and which identifies the specific Deliverable(s) to be purchased and any Acceptance Criteria or Specifications related thereto.

Termination

1. Termination for Cause by the State. Iowa Department of Management (DOM) may terminate this Quote, and any Purchasing Entity may terminate a Purchasing Instrument(s) entered into under this Quote, upon written notice of Google's breach of any material term of the Quote or associated Purchasing Instrument, if the breach is not cured within the time period specified in the notice of breach. In addition, DOM may terminate this Quote or a Purchasing Entity may terminate an associated Purchasing Instrument without advance notice if:
    1. Google makes false statements in connection with the Quote,
    2. Google, its staff, or its subcontractors have engaged in criminal conduct including fraud, misappropriation, embezzlement, or malfeasance,
    3. Google takes any steps, as determined in DOM's or the applicable Purchasing Entity's discretion, towards dissolution or suspension of business,
    4. Google's authority to do business here or elsewhere is threatened or lost,
    5. Google has failed to comply with applicable laws when performing pursuant to the Quote or Purchasing Instrument,
    6. Google's ability to perform is materially impacted by third-party claims of intellectual property violations by Google, or
    7. Google's actions may expose DOM, the State of Iowa, or a Purchasing Entity to material liability.

    Google shall notify DOM or the applicable Purchasing Entity of any events that could give rise to DOM's right to terminate this Agreement or a Purchasing Instrument for cause.
2. Termination for Cause by Carahsoft. Carahsoft may only terminate an applicable Purchasing Instrument or this Quote upon written notice of the Purchasing Entity's breach of any material term of this Agreement if the breach is not cured within 60 days of the Purchasing Entity's receipt of Carahsoft's written notice, or pursuant to the terms of the SOW attached hereto
3. Termination for Convenience. Following 30 days' written notice, a Purchasing Entity may terminate a Purchasing Instrument in whole or in part without cause. DOM may terminate this Order Form in whole or in part upon 30 days' written notice without cause.
4. Termination Due to Lack of Funds or Change in Law. Notwithstanding anything in this Quote to the contrary, DOM may terminate this Quote or a Purchasing Entity may terminate a Purchasing Instrument, in whole or in part, without penalty or liability and without any advance notice if:
    1. DOM or the Purchasing Entity determines that it has not been appropriated sufficient funds or funds have been reduced, unallocated, or delayed such that DOM or the Purchasing Entity cannot, in the entity's sole discretion, meet its obligations,
    2. DOM or the Purchasing Entity's authority has been withdrawn or materially altered, or its duties, programs or responsibilities are modified or materially altered, or
    3. There is a judicial decision that materially or adversely affects DOM's or a Purchasing Entity's ability to fulfill obligations under this Order Form or any applicable Purchasing Instrument.
5. Limitation of Payment Obligations. If DOM terminates this Quote or a Purchasing Entity terminates a Purchasing Instrument for cause, DOM or the applicable Purchasing Entity retains the right to contest amounts that remain unpaid as of the date of termination, subject to the terms of the Google Cloud Master Agreement Implementation Services Schedule. In all other termination contexts, the Purchasing Entity will pay those amounts due for goods or services performed by the Purchasing Entity for which the Purchasing Entity is obligated to pay up to the date of termination to the extent that funds to make these payments are legally available. Payment is contingent on submission and acceptance of invoices for sums due. Under no circumstances will the Purchasing Entity be liable for sums not expressly owed under the terms of the Quote or a Purchasing Instrument.
6. Google's Termination or Expiration Duties. As it relates to this Quote or any associated Purchasing Instrument, upon receipt of a notice of termination, upon expiration, or upon request of DOM or a Purchasing Entity, Google must:
    1. cease work under the Quote or Purchasing Instrument and take all appropriate actions to limit disbursements and minimize costs;
    2. provide a report to the Purchasing Entity addressing the Purchasing Entity's information needs, including the status of all work performed under the Quote;
    3. cease using and return any Customer Property or Customer-Owned Deliverables;
    4. comply with the Purchasing Entity's directions concerning Customer Data subject to the terms of the Cloud Data Processing Addendum;
    5. return or refund any Purchasing Entity payments for goods or services not provided to the Purchasing Entity;
    6. provide all Deliverables to the extent the Purchasing Entity has a property interest in the Deliverable; and

7. continue to perform and provide such goods and/or services under this Quote as the Purchasing Entity may request for a transition period of up to 90 days from the effective date of such termination or expiration and collaborate with the Purchasing Entity and any replacement contractor (the "Transition Term"), provided that: (i) Customer requests a Transition Term in writing before the relevant termination or expiration date; and (ii) Customer is only entitled to one Transition Term. As part of such request, the Purchasing Entity will inform Google of the number of days needed for transition. During the Transition Term, the Purchasing Entity agrees to pay Carahsoft any fees to which Carahsoft would be entitled under this Quote for goods and/or services performed or provided during such period. In the event the Purchasing Entity's request for transition assistance does not require Google to continue providing all of the goods and/or services under this Quote or applicable Purchasing Instrument, the Parties will negotiate in good faith a downward adjustment in the fees owed to Carahsoft.

Attachment A

Additional Terms and Conditions

The parties may be referred to herein individually as a **"Party"** or collectively as the **"Parties."** The Parties agree to the following:

1. Definitions. In addition to any other terms that may be defined elsewhere in this Agreement, the following terms shall have the following meanings:

1.1. **"Acceptance"** means the Purchasing Entity has determined a portion of the Deliverables satisfies its Acceptance Tests. **"Final Acceptance"** means the Purchasing Entity has determined all Deliverables satisfy the Purchasing Entity's Acceptance Tests. **"Non-Acceptance"** means the Purchasing Entity has determined that a portion of or all of the Deliverables have not satisfied the Purchasing Entity's Acceptance Tests.

1.2. **"Acceptance Criteria"** means the Specifications, goals, performance measures or standards, testing results, requirements, technical standards, representations, or other criteria designated by the Purchasing Entity and against which Acceptance Tests are conducted, including any of the foregoing stated or expressed in this Agreement, a Purchasing Instrument, any Documentation, and any applicable state, federal, foreign, and local laws, rules, and regulations.

1.3. **"Acceptance Tests"** or **"Acceptance Testing"** means the tests, reviews, and other activities that are performed by or on behalf of the Purchasing Entity to determine whether any or all Deliverables meet Acceptance Criteria or otherwise satisfy the Purchasing Entity, as determined by the Purchasing Entity in its sole discretion.

1.4. **"Authorized Contractors"** means independent contractors, consultants, or other third parties (including other Governmental Entities) that are retained, hired, or utilized by the Purchasing Entity in any way to assist the Purchasing Entity with any Deliverables provided hereunder.

1.5. **"Deficiency"** means a defect, flaw, error, bug, failure, omission, interruption of service, or other problem of any nature whatsoever related to a Deliverable(s) including any failure of a Deliverable(s) to conform to or meet an applicable Specification.

Deficiency also includes the lack of something essential or necessary for completeness or proper functioning of a Deliverable(s).

1.6. **"Deliverables"** means all of the services, goods, software, work, work product, items, materials, and property to be created, developed, produced, delivered, performed, or provided by or on behalf of, or otherwise made available through, Vendor, directly or indirectly, in connection with this Agreement.

1.7. **"Documentation"** means any and all technical information, commentary, explanations, design documents, **system** architecture documents, database layouts, code, test materials, training materials, guides, manuals, worksheets, notes, work papers, and all other information, documentation, and materials discovered, created, or developed by Vendor hereunder or otherwise related to or used in conjunction with any Deliverables in any medium, including hard copy, electronic, digital, and magnetically, or optically encoded media.

1.8. **"DOM"** means the State of Iowa Department of Management and, unless the context clearly indicates otherwise, any independent contractors, consultants, or other third parties (including other governmental entities) who are retained, hired, or utilized by DOM in furtherance of this Agreement.

1.9. **"Specifications"** means any and all requirements, technical standards, performance standards, representations, warranties, and other criteria related to any Deliverables, described or stated in this Agreement (including any exhibit or Documentation attached to, or provided in connection with, this Agreement), any Purchasing Instrument(s), and, solely to the extent not inconsistent with the foregoing, the Documentation.

1.10. **"Third Party Intellectual Property"** shall mean intellectual property, including third party software, licensed, **made**, conceived, or developed by a third party and provided or used by or on behalf of the Purchasing Entity or Vendor.

1.11. **"Vendor"** means the Party to the purchasing instrument including any employees, agents, independent contractors, or any other staff or personnel acting on behalf of or at the direction of Vendor, which personnel may alternatively be referred to as **"Vendor Personnel"**, and which includes any Vendor contractor performing or providing services or Deliverables under this Agreement.

2. Performance.

2.1. Generally. The Vendor will perform all work and provide all Deliverables in accordance with this Agreement, as well as any associated Purchasing Instrument.

2.2. Delivery.

2.2.1. *Risk of Loss*. To the extent any Deliverable(s), including any hardware or equipment, are mailed or shipped, Vendor shall bear all freight, shipping, handling, and insurance costs for the delivery and shall bear all risk of loss that may occur prior to the Purchasing Entity's Acceptance.

2.2.2. *Documentation*. Vendor will, at no charge to the Purchasing Entity, provide to the Purchasing Entity all Documentation related to the Deliverable(s) unless otherwise agreed to by the Purchasing Entity in writing.

3. Compensation and Additional Rights and Remedies.

3.1. No Additional Fees. Other than as permitted by Purchasing Instrument, the Purchasing Entity shall not be obligated to pay any other amounts to the Vendor, specifically including travel, lodging, and related expenses. In no event shall the Purchasing Entity be responsible for payment of Vendor's performance costs incurred in connection with this Agreement, including but not limited to equipment, supplies, personnel, salaries, benefits, insurance, training, conferences, telephone, utilities, start-up costs, and all other operational and administrative costs and expenses. To the extent any Purchasing Instrument calls for reimbursement of travel, such travel charges may never exceed the amounts allowed under DAS-SAE travel policy, DAS-SAE Title 210. (available at: https://das.iowa.gov/state-employees/travel-and-

relocation/210travel). For vendors, travel reimbursement may not exceed the amounts that would be payable under DASSAE 210.245.

(available at: https://das.iowa.gov/sites/default/files/acct_sae/sae_manual/210/2 10-245.pdf). In addition, in-state lodging reimbursement is limited to providers certified by the Iowa Department of Public Safety's Human Trafficking Prevention Training.

4. Acceptance Tests and Project Management.

4.1. All Deliverables must undergo the Purchasing Entity's Acceptance Testing as described in this section. If alternative Acceptance Testing processes are described in a Purchasing Instrument(s), the process set forth in the Purchasing Instrument will prevail. After the Vendor completes work on a Deliverable, it must inform the Purchasing Entity that the Deliverable is ready for testing. If the Purchasing Entity requests assistance during testing, the Vendor will assist without levying additional fees or other amounts. The Purchasing Entity will then test the Deliverable(s) to verify that each Deliverable conforms to its Acceptance Criteria. It will then inform the Vendor of Acceptance or Non-Acceptance. If the Purchasing Entity determines Non-Acceptance, the Vendor has ten (10) days to correct the issues and submit the work again for retesting. If the Purchasing Entity again does not provide Acceptance, the Purchasing Entity may pursue any of the following remedies:

4.1.1. Require Vendor to correct and repair such Deliverable(s) within such period of time as the Purchasing Entity may specify in a written notice to the Vendor;

4.1.2. Refuse to accept such Deliverable(s) without penalty or legal liability and without any obligation to pay any fees or other amounts associated with such Deliverable(s), or receive a refund of any fees or amounts already paid with respect to such Deliverable(s);

4.1.3. Accept such Deliverable(s) on the condition that any fees or other amounts payable with respect thereto shall be reduced or discounted to reflect, to the Purchasing Entity's satisfaction, the Deficiencies present therein and any reduced value or functionality of such Deliverable(s), or the costs likely to be incurred by the Purchasing Entity to correct such Deficiencies; or

4.1.4. Terminate the applicable Purchasing Instrument or seek any and all available remedies, including damages. Such termination may occur without prior notice or an opportunity to cure. The Purchasing Entity's right to exercise the foregoing rights and remedies, including termination of the applicable Purchasing Instrument, shall remain in effect through notice of Final Acceptance of all Deliverables. The Vendor's receipt of any notice of Acceptance, including Final Acceptance, with respect to any Deliverable(s) shall not be construed as a waiver of any of the Purchasing Entity's rights to enforce the terms of this Agreement or require performance in the event Vendor breaches this Agreement or any Deficiency is later discovered with respect to such Deliverable(s).

5. Ownership and Intellectual Property. 5.1. Information Technology Assurances. At the State of Iowa's or the Purchasing Entity's request, Vendor will, both during and after the termination or expiration of this Agreement, execute and deliver such instruments, provide all facts known to it, and take such other action as may be requested by the State of Iowa or Purchasing Entity to perfect its interest in Customer-Owned Deliverables. In the event the Purchasing Entity is unable, after reasonable effort, to secure Vendor's signature on any letters patent, copyright, or other analogous protection relating to

the Customer-Owned Deliverables, Vendor hereby irrevocably designates and appoints the Purchasing Entity and its duly authorized officers, employees, and agents, as their agent and attorney-in-fact, to act for and on its behalf to execute and file any such application or applications and to do such other acts to further the prosecution and issuance of letters patent, copyright registrations, and other analogous protection, including extensions and renewals thereon, with the same legal force and effect as if executed by Vendor.

5.2. Customer Property. Vendor may have access to Customer Property to the extent necessary to carry out its responsibilities under the Agreement and must comply with any and all the license terms, conditions, or restrictions applicable to any Customer Property.

6. Representations, Warranties, and Covenants.

6.1. Implied Warranties. To the extent applicable, and unless otherwise stated in a Purchasing Instrument, all warranties implied by law are preserved.

6.2. Deliverables Free of Deficiencies. Unless stated otherwise in a Purchasing Instrument, the Vendor guarantees that the Deliverables will be free from material Deficiencies and errors and will meet all Acceptance Criteria and express performance criteria. If the Purchasing Entity identifies any material Deficiencies, the Vendor must fix or replace the affected Deliverables at its own expense. The Vendor will assist the Purchasing Entity, promptly report any known issues, and correct Deliverables, even if the Deliverable(s) have been previously accepted.

6.3. Workmanlike Manner. The Vendor represents and warrants that all services to be provided under this Agreement or a Purchasing Instrument will be carried out in a workmanlike manner by qualified personnel, and the work must align with the terms of the Agreement and Purchasing Instrument as well as industry standards for similar tasks. In cases where no specification exists, the Parties agree to follow generally accepted industry standards. If the Purchasing Entity identifies services not meeting

these standards, the Vendor will re-perform them at no extra cost. The Vendor will refund any fees paid by the Purchasing Entity for any services were not satisfactorily provided and cannot otherwise be cured.

6.4. Sole Ownership. Vendor represents and warrants that the Purchasing Entity shall acquire sole ownership of all CustomerOwned Deliverables, free from any rights or interests of Vendor or of any third party. Vendor shall not retain any copies of any Customer-Owned Deliverables.

7. Termination.

7.1. Termination for Cause by the State. DOM may terminate this Agreement, and any Purchasing Entity may terminate a Purchasing Instrument(s) entered into under this Agreement, upon written notice of Vendor's breach of any material term of the Agreement or associated Purchasing Instrument, if the breach is not cured within the time period specified in the notice of breach. In addition, DOM may terminate this Agreement or a Purchasing Entity may terminate an associated Purchasing Instrument without advance notice if:

7.1.1. Vendor makes false statements in connection with the Agreement,

7.1.2. Vendor, its staff, or its subcontractors have engaged in criminal conduct including fraud, misappropriation, embezzlement, or malfeasance,

7.1.3. Vendor takes any steps, as determined in DOM's or the applicable Purchasing Entity's discretion, towards dissolution or suspension of business,

7.1.4. Vendor's authority to do business here or elsewhere is threatened or lost,

7.1.5. Vendor has failed to comply with applicable laws when performing pursuant to the Agreement or Purchasing Instrument,

7.1.6. Vendor's ability to perform is materially impacted by third-party claims of intellectual property violations by Vendor, or

7.1.7. Vendor's actions may expose DOM, the State of Iowa, or a Purchasing Entity to material liability.

Vendor shall notify DOM or the applicable Purchasing Entity of any events that could give rise to DOM's right to terminate this Agreement or a Purchasing Instrument for cause.

7.2. Termination for Cause by Vendor. Vendor may only terminate an applicable Purchasing Instrument or this Agreement upon written notice of the Purchasing Entity's breach of any material term of this Agreement if the breach is not cured within 60 days of the Purchasing Entity's receipt of Vendor's written notice.

8. General Provisions.

8.1. Immigration Status. The Vendor is responsible for ensuring compliance with all Visa requirements. The Purchasing Entity requires the Vendor to conduct E-Verify employment-eligibility verifications of Vendor personnel working under this Agreement at the Vendor's cost. The Vendor shall provide to the Purchasing Entity with the E-Verify results as directed.

8.2. Waiver. The parties may agree in writing to waive some aspect of Vendor performance. Failure by one Party to require performance under the Agreement by the other Party does not affect the right to enforce the Agreement's terms or claim breach concerning subsequent Agreement compliance issues.

8.3. Cumulative Rights. The various rights, powers, options, elections, and remedies of DOM or any Purchasing Entity provided for in this Agreement shall be construed as cumulative.

8.4. Severability. If any provision of this Agreement is determined by a court to be invalid or unenforceable, such determination shall not affect the validity or enforceability of any other part or provision of this Agreement.

8.5. Time is of the Essence. Time is of the essence with respect to the Vendor's performance of its obligations under this Agreement. Vendor shall ensure that all Vendor Personnel providing services

and Deliverables hereunder are responsive to the Purchasing Entity's requirements and requests in all respects, including in accordance with any specific timelines identified in a duly executed Purchasing Instrument.

8.6. Right of Inspection/Vendor Compliance. The Purchasing Entity may inspect the Vendor's books and records at reasonable times in order to monitor the performance of this Agreement or a Purchasing Instrument, including but not limited to any request that the Vendor provide a copy of its affirmative action program, containing goals and time specifications in accordance with Iowa Admin. Code ch. 11-121. All subcontracts shall contain provisions that allow the same. The Vendor shall promptly comply with and correct any deficiencies noted in any audit and promptly implement any recommendations requested by the Purchasing Entity. The Vendor shall not impose any charge or fee in connection with any such audit.

8.7. Attachments. The Parties agree that if any document is attached hereto by the Parties, and referred to herein, then the same shall be deemed incorporated herein by reference as if fully set forth herein.

8.8. Further Assurances. Each party shall do and perform, or cause to be done and performed, all such further acts and things, and shall execute and deliver all such other agreements, certificates, instruments and documents, as the other party may reasonably request in order to carry out the intent and accomplish the purposes of this Agreement.

8.9. Force Majeure. If one Party is unable to fulfill its obligations under this Agreement due to circumstances beyond its control, including unforeseeable events that no one could have predicted or prevented, such as acts of God, war, civil disturbances, or other catastrophic events, that Party will not be considered in breach of this Agreement. These circumstances must be abnormal and unforeseeable, and the Party affected must have taken all necessary precautions to prevent them. However, financial difficulties, legal restrictions, strikes, labor unrest, supply chain disruptions, internet failure, power outages, hacker attacks, viruses, and Security Breaches are not considered force majeure events. If a delay or inability to perform is caused by a subcontractor hired by the Party, the Party cannot use force majeure as an excuse unless the subcontractor is also affected by a force majeure event. If a force majeure event affects the Party's performance, the Party will make its best efforts to provide an alternative, if possible, comparable solution. The Purchasing Entity will determine whether the alternative solution is comparable. The Party invoking force majeure must immediately inform the other Party about the event causing the delay and the reasons behind it. Both Parties will work together to minimize the impact of the delay and the scope of work affected by the unforeseen events. If the Vendor's performance obligations have specific deadlines, those deadlines will be extended by the amount of time lost due to the force majeure event.

Google Public Sector Services (GPSS) Statement of Work

Introduction:

This Statement of Work ("SOW") is a part of, and incorporated into, State of Iowa Contract 2024-BUS-0226 ("Contract"), leveraging NASPO Master Agreement AR2472 entered into between the State of Iowa ("Agency" or "Customer") and Carahsoft Technology Corporation ("Vendor"). Vendor has elected to subcontract the work described in this SOW to Google ("Subcontractor").

1. Background

Customer has provided the following information as context for this Statement of Work.

The Iowa Department of Health and Human Services (HHS) ("Customer") is executing a mission-critical modernization of its Comprehensive Child Welfare Information System (CCWIS). This initiative replaces the legacy Family and Child Services (FACS) mainframe and Joining Applications and Reports from Various Information Systems (JARVIS) application with a modular, cloud-native system designated as "VISION".

This Statement of Work (SOW) governs the first twelve (12) months of this roadmap, focusing strictly on the "Initial Case Setup" and "Core Case Management" modules.

This phase will encompass producing a "single source of truth" for case information and achieving operational readiness within the fixed timeline through rigorous scope containment and governance.

2. Services

2.1. **Workstream 2.1.** The Services under this Workstream 2.1 are governed by the Implementation Services Schedule that is incorporated into the Carahsoft Quote

Workstream 0: Project Oversight & Governance

Strategic Program Enablement:

- Engage with key program stakeholders to define goals, gather requirements, and establish expected outcomes of the program reflected in a high-level plan of deployment activities to be completed based on Google's leading practice methodology.
- Host a pre-project Kick Off meeting with the Customer to determine if the prerequisites have been met, set expectations, and discuss project execution strategy.
- Project Planning:
  - Host an on-site project Kick Off meeting to start the engagement, set expectations and project execution strategy.
  - Provide the Project Charter that includes the project phases, detailed Project Plan with estimated milestone completion dates, and deployment strategy.
  - Build Project Plan document which will include a project timeline as well as serve as a location to identify and address risks and constraints encountered throughout the engagement.
  - Identify and coordinate resolution of risks and issues during the engagement by actively engaging with stakeholders to support removal of potential blockers and mitigate impacts to program timelines.
  - Host an on-site project Closeout meeting to recap the project goals, summarize lessons learned, highlight accomplishments within the scope of the engagement, and review submitted deliverables.
- Provide Status reports:
  - Monthly:

        - Provide executive level updates of program progress and benefits realization.
        - Review benefits against objectives and goals.
        - Review major risks or changes.
    - Weekly:
        - Provide a high-level status report via email to key program stakeholders of program progress, issues and risks identified, and key accomplishments.
        - Discuss status of deliverables and key milestones.
    - Twice Weekly:
        - Conduct Program Management (PM) syncs with the Customer to review the following:
            - Progress of project.
            - Changes to the program strategy.
            - RAID Logs and changes and determine escalation.
            - Upcoming milestones and future phases of the project.
- External reporting:
    - Provide necessary information and artifacts related to the Google scope of work to support the Customer in its development and submission of required Advance Planning Document (APD) updates.

Establish the Program Governance Office (PGO):

- Outline the purpose of the Program Governance Office (PGO), how it relates to other bodies at the Customer and the extent of governance authority.
- Document the role and responsibilities of the PGO, including, but not limited to:
    - Change Control Board;
    - Standardized communication methods; and
    - Backlog curation and approval of scope modifications.
- Define roles, responsibilities and accountability across workstreams and teams how they will interact with the PGO.
- Provide communication requirements to be used as a guide for teams who will need to escalate requests through the PGO and how decisions will be communicated through the PGO.

Change Control Board:

- Empower customer stakeholders to manage collisions between various workflows.
- Provision and manage a product backlog and approve or deny scope changes within 48 business hours.
- Maintain a formal "Not Now" list for this 12 month release to record desired future features, functions, or requirements that are out of scope for the current SOW; this mechanism supports transparent backlog management and validates joint alignment with the State.
- Engage with the Customer to prioritize the capabilities/features which are within the scope of this project.

Workstream 1: System Development

Business Context and Requirement Knowledge Transfer

- Conduct stakeholder group sessions (as required by Google) to conduct knowledge transfer of the existing documentation.
- Identify business workarounds currently dependent on application or off-system processes.
- Use tooling to extract business rules, logic flows, and calculations from legacy code.

User Interface Design

- Conduct review meetings with stakeholders to existing designs and determine remaining refinement.
- Finalize up to forty (40) existing Customer webpage/tab designs and/or UI/UX workflows, as identified in the business process documentation, by finishing design details, minor adjustments, or adherence to brand guidelines.

- Conduct sessions to gather input from stakeholder, caseworkers and supervisors, optimizing business processes where possible to inform the final design.
- Apply human-centered design principles to layout, navigation, and interaction models.
- Provide mobile-responsive designs that incorporate Section 508 accessibility tenets to support broad accessibility and flexibility.
- Provide a material UI component library of design elements.
- Provide UI workflows based on business process maps and user feedback; verify designs are mobile-responsive.

Application Implementation

- Integration Component Development:
  - Build and configure the ingestion/export pipelines specific to the Core Case Management.
  - Provision the APIs, data feeds, or event-driven components required for the Core Case Management.
  - Provide new translation or mapping layers needed to reconcile the Core Case Management data model with legacy systems.
- Design and write the initial case setup and Core Case Management functionality using cloud-native services, covering the following In-Scope Workflows, Tabs, Widgets and Dashboards:
  - Person Search & Profile:
    - Person Search interface
    - Person Details widget
    - Person Profile
    - Person-level Electronic Case File
  - Case Setup Workflow:
    - Case Overview (central case hub)
    - Associations Workflow Step
      - Person-to-case linking, participant list
    - Services Workflow Step
      - Record Out-of-Home Living Arrangements and essential services
    - Checklist Workflow Step
    - Approval Workflow Step
    - Social Worker Case Manager (SWCM) Checklist Workflow Step
    - Workflow Progress Bar overlay
    - Living Arrangements
  - Electronic Case File:
    - Electronic Case File (ECF)
    - Case-level ECF
    - Upload Document Widget (accessible throughout VISION)
  - Worker Safety:
    - Abuse and Criminal History
  - Minimum Court Development:
    - Court (case-level)
    - Person-level Court
  - Child Protection Worker (CPW) Dashboard:
    - All Cases
    - Draft Cases
    - Pending Assignment
    - Pending Transfer
  - SWCM Dashboard:
    - Active Cases
    - Pending

        - Pending
        - Active
        - Transferred
        - Shared With
- Analytical and Generative AI (GenAI) Capabilities:
    - Implement GenAI capability to read narrative reports, and extract key risk indicators (e.g., "drug use," "unattended child," "physical injury").
    - Implement the ability for the system to identify why certain words or patterns triggered risk signals (for explainability).
    - Define three (3) GenAI capabilities to implement for Case Management such as:
        - Draft case notes, court summaries, or service referrals using structured case data.
    - Implement defined GenAI capabilities into Case Management workflows.
    - Implement speech-to-text and summarization for dictating notes into structured entries.
    - Implement document parsing capabilities,
- Application Testing & Validation:
    - Provide automated (where possible) test suite covering unit, integration, and functional test cases.
    - Align test scenarios with traceable requirements verified against Business Process and Business Logic.
    - Execute continuous testing within the CI/CD pipeline.
    - Collaborate with QA team and UAT testers to validate functional and non-functional behaviors.
    - Conduct initial performance profiling to establish baseline performance benchmarks and monitor thresholds for key user flows.
- Observability and SLA Monitoring:
    - Set up dashboards to monitor integration health (e.g., throughput, error rate, latency).
    - Define alerting thresholds for service-level breaches or data sync anomalies.
    - Enable audit-level tracing for compliance and forensics.

Future Module Roadmap Development

- Prepare a roadmap for remaining Case Management business process workflows and integrations that are not part of the critical path.
- Prepare a roadmap for modernizing the remaining CCWIS modules:
    - Use tooling to extract business rules, logic flows, and calculations from legacy code.
    - Provide a business rules catalog with rule descriptions, code references, and triggering conditions.
    - Segment the remaining module capabilities based on business capability and technical cohesion.
    - Provide recommended sequencing based on priority, complexity and risk.
    - Engage with the Customer to prioritize the capabilities and develop a notional release plan based on the discovery and design activities.

Cloud Foundation Deployment:

ASSESSMENT:

- Conduct three (3) to six (6) remotely-hosted, two (2) hour sessions, as determined by Google, to collect and review the technical requirements and objectives. This activity will cover the following areas:
    - Organization structure and resource hierarchy:
        - Define requirements for organization hierarchy, including folders, projects, and organizational policies.
        - Define requirements for naming conventions and labeling approaches for folders, projects, and resources.
        - Define requirements for access and security controls for folders, projects, and resources.
        - Define requirements for cost management model, including spend visibility and budget alerting.
    - User and access management:

        - Identify the process and requirements for user authentication and authorization and/or Single Sign-on (SSO) federation to an Identity Provider (IdP).
        - Define conventions for users, groups, and service accounts roles in Google Cloud Platform (GCP) and the policies associated with these roles.
    - Technical Infrastructure:
        - Define Virtual Private Cloud (VPC) requirements.
        - Define specific roles for specific service administration e.g., storage, identity, etc.
        - Define any network connectivity requirements (e.g., site-to-site VPN, cloud interconnect).
    - Infrastructure as Code (Iac):
        - DefineGit-based repository for storing and managing IaC
    - Logging:
        - Define framework to integrate Google Cloud logs to customer's Security Incident Event Management System (SIEM).
    - Migration:
        - Review current storage assets, analyze data volume, access patterns, and performance requirements to define migration patterns and strategies.
    - Assured Workloads:
        - Review customer requirements for the advanced security features to store or process regulated or sensitive data (e.g. HIPAA, FedRAMP, ICWA, CJIS).

DESIGN:

- Provide a solution that meets Customer requirements collected in the assessment phase and provide leading practices, recommendations, and design guidance.
- Provide a Technical Design Document (TDD) draft that describes the future-state and design details in the following areas:
    - Organization structure and access:
        - Design organizational hierarchy, user access, and roles.
    - Network:
        - Design initial network topology to facilitate connectivity to service applications that will be deployed in Customer's GCP, on-premises, and/or other cloud environments.
        - Design network security controls (firewall configuration).
    - Storage:
        - Identify policy needs for areas including storage, data storage, data residency.
        - Design for backup, recovery, disaster recovery, high availability.
        - Provide guidance on data governance, data management, data lifecycle management, data ingestion, data processing, naming conventions, environments, data sharing and federation.
        - Provide guidance on data security and encryption policies.
    - Security:
        - Document security and governance controls to be leveraged by GCP.
        - Determine cryptographic key management solution and governance.
        - Define service account requirements and define policies of service entitlement.
        - Design organizational policies for restricting capabilities within GCP.
        - Define resource and audit logging tooling and processes for accessing relevant logs.
    - Billing and Cost Control:
        - Validate billing account and billing administrator roles are correctly configured.
    - Logging/Monitoring/Alerting:
        - Define resource and audit logging tooling and processes for accessing relevant logs.
    - Automation:

        - Recommend automation strategy for repeatable deployments and management of the GCP environment.
    - Disaster Recovery:
        - Design for failure based on customer defined recovery time objective (RTO) and recovery point objective (RPO) requirements.
    - High Availability:
        - Design for Customer high availability requirements.
    - Assured Workloads:
        - Design Google Cloud infrastructure components for alignment with advanced security features (may include Assured Workloads (AW), VPC Service Controls, and/or Cloud Armor policies), or confirm that Assured Workloads is not required.

IMPLEMENTATION SUPPORT:

- Infrastructure Deployment:
    - Implement Infrastructure As Code (IaC) to deploy all infrastructure resources.
- User and Access Management:
    - Integrate identity provider according to the design specifications and conduct functional testing.
- Logging and Monitoring:
    - Activate Cloud Logging for all relevant GCP projects and services.
    - Define log retention policies.
    - Activate Cloud Monitoring for all relevant GCP projects and services.
    - Define alerting policies and configure notification channels.
    - Implement google cloud log shipment to Customer's SIEM.
- Security:
    - Implement least privilege model when granting access to cloud environments.
    - Provide service account access based on separation of duties to avoid super admin access to a single service account.
    - Implement appropriate firewall rules and restricted identity or attribute based access configurations.
    - Provide updated TDD which includes what security controls have been configured.
    - Enable all applicable features of Security Command Center (SCC) to provide 360 degree scanning and alerting for any security related vulnerability and issues.
    - Support Customer in the configuration of Partner Interconnect or HA VPN for on-premise connectivity.
- Test all delivered resources including:
    - Conduct comprehensive testing to validate the functionality of the logging and monitoring setup.
    - Trigger test alerts to verify notification channels and response procedures.
    - Simulate load and stress conditions to validate the logging and monitoring system can handle production volumes.

Standard Implementation Support

- Provide guidance to Customer's technical team for Customer's design and implementation of any SSO federation requirements.
- Implement and validate the following:
    - Infrastructure-as-Code source repository and CI/CD using Cloud Build.
    - Root GCP organization and the organization administrator access and roles.
    - Billing account, payment profile, and billing administrator access.
    - Folder and project hierarchical structure and labels according to the defined labeling convention.

- Initial user groups in Cloud Identity and user groups role assignment in Identity and Access Management (IAM) according to the defined user access management convention.
- Access control for the foundational resource hierarchy.
- Network topology including VPC (single or shared mode), and network security controls (firewalls, routing policies).
- Cost management and tracking model.
- Cloud Operations Suite project for Cloud Monitoring and Cloud Logging.
- Security Command Center Standard (Security Command Center Premium or Enterprise may be substituted if Customer has purchased the required SKUs).

Integration Services

DESIGN

- Define source to target mapping for VISION Integrations..
- Evaluate and design data migration process to migrate data FACS to VISION.
- Evaluate requirements for receiving data from JARVIS to VISION for specified tables.
- Define integration patterns (real-time API vs. batch) for required interfaces supporting the Case Management application.
- Design API contracts and endpoints for synchronous data (table) exchanges.
- Design batch (table) integrations from required systems.
- Validate integration availability and usability.
- Define integration boundaries and service interfaces for mainframe-to-cloud system interactions.
- Generate early-stage infrastructure and integration service recommendations.

IMPLEMENTATION

- Build and configure up to twenty eight (28) required integrations, as requested by Customer, to VISION (e.g., overnight case updates), including necessary data transformations.
- Expose up to five (5), as determined by Google, integrations that make VISION data available to other internal systems.
- Implement retry logic, error capture for failed exports.
- Integrations:
  - Person Lookup & State ID Management:
    - Implement API client wrapper for Iowa Automated Benefit Calculation System (IABC) person search and State ID operations.
    - Implement duplicate prevention logic using search results to identify correct identities.
    - Provision data transformation layer mapping VISION person model to/from IABC formats.
  - Global360 Document Retrieval:
    - Implement API client for document search and retrieval for files.
  - FACS Data Loads:
    - Implement FACS to VISION data integration for required tables.
  - JARVIS ODS:
    - Implement integration for required JARVIS ODS data to VISION.
  - JARVIS Magic Button Draft Case Creation:
    - Provision pipeline extracting completed incident data from JARVIS ODS.
- Implement integrations or read-only views to utilize required data from out-of-scope systems or functionality:
  - Living Arrangements:
    - Configure read-only provider lookup from FACS I3 for licensed home selection.
    - Provide Read Update Delete operations for Living Arrangement type, start/end dates, AFCARS minimum data elements
  - Associations:

        - Leverage existing JARVIS Magic Button to auto-pull case members/associations.
        - Leverage Person Search for duplicate prevention when adding associations.
    - Subsidized Guardianship:
        - Read-only display of existing subsidy payment history from FACS mainframe.

Workstream 2: Data Platform

App Deployment, Data Deployment, CI/CD

- [redacted]

Data Strategy & Parallel Migration

- **Data Profiling**
    - Conduct four (4) sixty (60) minutes meetings to review existing Data Dictionary documentation and source-to-target mapping documents.
    - Validate or conduct script based profiling of source tables, gathering volume, size and shape data to inform the target data model.
    - Perform a Data Loss Prevention review of required data to identify potential PII/PHI.
- **Data Model Discovery and Mapping**
    - [redacted]
    - Confirm design for VISION Unified Data Platform.
    - Design data model including core entities, relationships, constraints and dependencies relevant to child welfare domains:
        - [redacted]
    - Provide field-level mappings from source to target schema.
    - Provide Entity-Relationship Diagrams (ERDs) and mapping diagrams.
    - Provide a physical data model.
- **Data Pipeline**
    - Provision reusable pipeline templates with error handling and logging.
    - Produce up to fifty (50) data pipelines, as determined by Google, for ingestion and transformation datasets.
    - Implement transformations and business logic.
    - Utilize code conversation techniques to convert legacy business logic to modern language.
    - Integrate automated data quality checks (up to 10 checks per pipeline, as determined by Google).
- **Data Validation**
    - Define fifty (50) data validation rules for ongoing incoming and outgoing data.
    - Implement framework for automated data validation and reconciliation.
    - Establish automated quality checks for completeness, accuracy, consistency, and timeliness, per pipeline.

- Validate data replication and completeness in target environments.
- Validate end-to-end data flows.

- **Data Migration**
  - Provide a migration plan with dependencies, milestones, and critical path and rollback plan.
  - Provide a data migration validation process and associated scripts to confirm completeness and accuracy.
  - Perform ongoing data integration in lower environments during development.
  - Perform one (1) pre-production test data migration in a lower environment.
  - Execute the final data migration cutover process during the Go-Live event.
  - Perform data validation on data migrated to VISION.
- **Virtual Data Platform**
  - Provide twenty (20) database views from the VUDP that are available for usage by other internal systems or processes.

Workstream 3: Training Enablement

Enablement Artifacts

- Provide training documentation aligned with the rollout roadmap of the system functionality and roles.
- Produce end-user enablement materials (e.g., written guides, video tutorials, quick reference cards, etc.).
  - Up to three (3) written user guides as required by the solution.
  - Up to five (5) single-page job aids (for specific processes/focus areas) as required by the solution.
  - Up to five (5) video tutorials (1-2 minutes each) as required by the solution
  - One set of Frequently Asked Questions, organized for easy end user reference (FAQs).
  - Additional materials to be determined based on end user need and team capacity.
- Conduct either (a) five (5) or fewer initial enablement (train-the-trainer) sessions each not to exceed two (2) hours in duration, OR (b) two (2) initial enablement (train-the-trainer) sessions, each not to exceed 4 hours in duration (as determined by Customer needs and logistics).

Hypercare Support (post production):

- Provide a production roll-out deployment plan.
- Prepare the production environment.
  - Setup logging and monitoring for prod environment.
- Provide advisory guidance to the Customer during rollout to the new production environment.
  - Monitor the application for up to four (4) weeks, as determined by Google, and provide troubleshooting/break-fix support.
- Prepare a handover report, which may include recommendations on future enhancements and changes.

Workstream 4: Transition to Managed Services Provider (prior to the conclusion of engagement):

- Conduct one (1) ninety minute (90) configuration workshop to provide guidance on the following topics:
  - Configuring IAM access for SCC
  - Enabling Security Sources for SCC
  - Identifying required audit logs for Security Sources
  - Identifying additional views of SCC to be implemented (e.g., organizational, folder, project)
  - Mapping of compliance frameworks to detectors
- Conduct one (1) ninety minute (90) workshop on managing Security Command Center findings. Topics include:
  - How to create, filter, and mute notifications from Event Threat Detection (ETD), Container Threat Detection (CTD), and VM threat Detection (VMTD)
  - How to create, filter, and mute notifications from Security Health Analytics (SHA)
  - How to create custom modules for Threats and Vulnerabilities

- Conduct one (1) ninety minute (90) workshop on setting notifications and reviewing SCCP dashboard. Topics include:
    - How to configure notifications with external destinations
    - How to export and analyze Security Command Center findings into BigQuery
- Conduct one (1) ninety minute (90) interactive session on reviewing Security Command Center finding Playbooks Topics include:
    - [redacted]
- Schedule and conduct one (1) remotely-hosted, two-hour transition coordination meeting.
- Conduct two (2) remotely-hosted, two-hour knowledge transfer meetings scheduled within ten (10) business days of each other.
- Answer any outstanding questions or concerns within two (2) business days following each transition meeting.
- Review Terraform code samples (as described in the SOW deliverables).
- Walk through the Technical Design Document (TDD) during one (1) remotely-hosted, two-hour meeting.

2.2. [Mandiant Consulting] **Workstream 2.2.** The Services under this Workstream 2.2 are governed by the Mandiant Consulting Services Agreement that is incorporated into the Carahsoft quote.

Workstream 1: Testing

Advanced Security Assurance

Network Architecture Verification

Assess the proposed design and implementation of the Customer's planned Google Cloud Platform technology stacks. Focus on the Customer's proposed network security controls and architecture to identify possible strategies to mitigate the impact or risks associated with unauthorized access, lateral movement, and unauthorized resource access.

- Facilitate up to seven (7), two (2) hour workshops, as required by the solution, to better understand the Customer's current network infrastructure, segmentation strategies, and layered controls. Objectives covered may include the following:
    - Governance and Compliance
    - Secure Architecture and Design
    - Secrets and Data Protection
    - Security Risk Management
    - Identity and Access Management
    - Incident Response and Forensics
    - Secure Software Development Lifecycle
    - Host and Endpoint Protection
    - Logging and Detection
- Document relevant findings and recommendations in a report for the Customer following analysis. Review mutually agreed upon existing Customer network architecture diagrams and relevant documentation, prior to Workshops.
- Review the proposed network architecture and design which will include an assessment of following network-focused domains:
    - Cloud Network:
        - Access
        - Distribution
        - Core
    - Core Network within GCP:
        - Core Foundation (Routing, Switching)

        - Core Services (Security, Virtualization)
    - Virtualization Infrastructure:
        - Virtual switch configuration and management
        - Integration with physical network infrastructure
        - Secure management of virtualization stack
    - Network Perimeter:
        - Remote Access / VPN
        - Perimeter (external-facing) services
        - DMZ / enclaves
    - Review and discuss the network segmentation strategies for up to two (2) network segments, as required by the Customer, to validate that zone boundaries are well-defined and maintained. This review will focus on the following areas:
        - Network Segmentation
        - Security Zone Definitions
        - Identity & Trust
        - Visibility
        - Policy Enforcement and device / resource-based isolation
        - Technology platforms that enforce segmentation
- Review and discuss operational processes and controls in place for administering the network infrastructure (e.g. configuration management, network device management) to identify opportunities for reducing the risk of network infrastructure compromise as a result of insecure administrative practices.
- Leverage industry leading practices and standards to review and discuss Customer's current cloud infrastructure hardening strategies and deployed security controls.
- Provide specific recommendations relevant to additional security hardening and supplementary configuration parameters that should be considered for further minimizing the scope of permissible communication flows and access methods across network boundaries.

Testing & Quality Assurance

Test Planning & Preparation

- Establish test governance, roles, escalation paths and schedule.
- Produce test plans and detailed test cases for integration, system, regression and UAT across functional and non-functional areas.
- Define, provision and validate test environments, including environment configuration, external system stubs/mocks and access controls.
- Define test data sets with Customer to ensure repeatable and representative testing.

Integration Testing

- Execute integration and end-to-end system tests for all interfaces, APIs, batch jobs and reporting flows used by VISION. Perform data validation across OLTP/VDW.
- Validate that developer/unit test artifacts meet agreed quality criteria prior to system testing (spot checks and checklist validation).

User Acceptance & Regression

- Plan and facilitate UAT for application, reporting/BI and interface files with business users; provide scripts, defect triage and daily status.

Defect & Release Activities

- Establish defect categorization, SLAs, triage meetings and tracking.

- Define runbooks validation, and production dress rehearsal; support cutover activities and immediate post-go-live verification.

Acceptance & Assumptions

- **Exit/Acceptance criteria:** Define criteria required for test phase completion (e.g., no critical defects, open defects, successful UAT signoff).
  - UAT sign off is confirmed when Customer acknowledges in writing:
    - Delivery of UAT test plan
    - Completion of Customer UAT test within mutually agreed time frame
    - Documentation of identified priority work that will be completed within the confines of the Project Plan.
- **Assumptions:** Specify assumptions about environment availability, data access, business user availability for UAT, and defect-fix SLAs.

GCP Penetration Test

[redacted]

Additional Services details:

- Security assessment of Customer GCP-hosted environment
- Includes an assessment of up to 1 GCP projects
- Includes 1 assumed breach scenario:
  - Customer will provide necessary access for each assumed breach scenario
- Includes external scanning of up to 50 internet-facing IP addresses and hostnames
- Includes external OSINT and reconnaissance of Customer GCP environment
- Customer will provide an IAM account with full read access to the environment and a production or cloned production VM
- Mandiant will use a risk-based approach to determine the detailed level of granular scopes within the identified areas
  - May include active testing from Customer-provisioned systems
  - Does not include a comprehensive assessment of Google Workspace
  - Includes a one-time reassessment of critical and high findings
- Does not include a comprehensive security assessment of custom web applications identified on assessed systems
  - Testing is not intended to avoid detection by Customer defenses
  - All GCP penetration testing activities are time-bound to a total of 20 consultant-days of work
  - Performed without restrictions on the days and times when testing can occur
  - [redacted]

Web Application Assessment (Pre-Production Deployment)

[redacted]

Additional Services details:

- Security assessment of one (1) web application
- Includes automated scans of the in-scope web applications and is not intended to avoid detection by Customer netw defenses
- Each web application assessed Includes a one-time reassessment of critical and high risk findings
- Customer will provide Mandiant with all testing requirements prior to the assessment start date, including but not limited network access and credentials to all in-scope applications
- Mandiant will perform testing using the allotted time provided
- Includes up to 50 unique web API endpoints within the web application. Mandiant defines a web API endpoint as:
  - [redacted]
  - API cost estimates are estimates as APIs may vary in code complexity
  - [redacted]
- All assessment activities for web applications are time-bound to a total of 20 consultant-days of work
- All assessment activities are performed without restrictions on the days and times when testing can occur
- All assessment activities are performed remotely

Web Application Assessment (Post-Deployment Reassessment)

The Web Application Assessment aims to identify security weaknesses in a Customer application through testing of the application's external interfaces that have occurred after the initial design and deployment of the web application into production. This assessment will include testing for security weaknesses relevant to the type of application. These may include weaknesses such as those related to cross-site scripting, SQL injection, OS command injection, improper authentication and access control, cross-site request forgery, improper error handling, encryption issues, or open redirects.

Mandiant will leverage its familiarity with the application to provide an assessment to identify newly introduced and unremediated findings. Mandiant will leverage its prior knowledge about how the application functions under normal condition including normal inputs and associated outputs. Mandiant will then assess the application's response to various inputs and conditions using appropriate security testing tools.

Within the parameters of the agreed-upon scope, Mandiant will test the application as an unauthenticated user and at varying major roles as appropriate for the application. For example, the authenticated testing may include as a normal user and as an administrative user, to test the application's authentication and access control functions. Mandiant will use a combination of internally developed tools and scripts in addition to open source and commercial tools.

Additional Services details:

- Security assessment of one (1) web application
- Includes automated scans of the in-scope web applications and is not intended to avoid detection by Customer netw defenses
- Each web application assessed Includes a one-time reassessment of critical and high risk findings
- Customer will provide Mandiant with all testing requirements prior to the assessment start date, including but not limited network access and credentials to all in-scope applications
- Mandiant will perform testing using the allotted time provided
- Includes up to 50 unique web API endpoints within the customer web application. Mandiant defines a web API endpoint as
  - [redacted]
  - API cost estimates are estimates as APIs may vary in code complexity
  - [redacted]
- All assessment activities for web application are time-bound to a total of 15 consultant-days of work
- All assessment activities are performed without restrictions on the days and times when testing can occur
- All assessment activities are performed remotely

Test Infrastructure Enablement:

- [redacted]
- Provision and configure the non-production environments (Test, UAT) required for system integration testing.
- Support performance profiling and optimization of core workflows and data access patterns during testing cycles.
- [redacted]
- [redacted]
- Configure Mainframe Assessment Tool (MAT) to analyze customer's mainframe code

Google will NOT perform the following:

- Develop, configure, or deploy functionality related to financial transactions or payments, including workflows for subsidy payments. billing. financial reconciliation, and eligibility determination.
- Develop, configure, or deploy functionality related to automated statutory finalization of cases, including the development of a bidirectional integration with Iowa Courts.
- Develop write-capabilities (e.g., creation, update, delete) to FACS for data collected in VISION to update the basic facts of a case, including living arrangements, services tracked in VISION, or case associations.
- Develop full end-to-end module functionality, business rules, or financial logic for Living Arrangements, Services, Associations, or Subsidized Guardianship.
  - This scope is strictly limited to the user-facing data entry and write-capabilities required for the initial case setup and Core Case Management workflows (e.g., initial recording of a service or association during Case Setup), and read-only views of legacy data as explicitly defined in the Services section (Workstreams 1 and 2). All financial, billing, and provider licensing aspects of these modules are excluded.
- Be responsible for any third party assessments and/or assessment or any compliance certifications with respect to the Customer's GCP environment in relation to federal requirements.
- Perform functional testing and user validation.
- Modify data, systems, or code in Customer's on-premises environment.
- Install, configure or implement any third-party tools outside the scope of services specified in this SOW.
- Create bi-directional integration APIs for the Customer's System not outlined in this SOW.
- Access a live production environment or make any changes to an existing production environment(s).

- Guarantee specific model performance metrics for any predictive analytics or Document AI efforts.
- Perform migration of existing GCP Folders and/or Projects.
- Perform migration of any Customer services.
- Perform accessibility testing (Section 508/Web Content Accessibility Guidelines (WCAG)) or provide any related compliance documentation (VPATs, test results, etc.) for any components.
- Author Final ACF Deliverables.
- Assume Overall Responsibility for Customer Compliance & Attestation.
- Conduct Customer-Owned Testing & Assessment Activities.
- Manage Customer Processes & Definitions.
- Perform Ongoing Operational Reporting & Monitoring.
- Provide Accessibility Compliance Artifacts.
- Act as a qualified security assessor (QSA), independent auditor, or any form of official auditor regarding regulatory compliance.
- Provide, ensure, certify, or formally attest to the Customer's compliance with any legal, regulatory, or industry standard (e.g., FedRAMP, PCI-DSS, HIPAA, CJIS, IRS 1075).
- Deploy any code, configurations, or solutions directly into a production environment.
- Provide post-engagement warranty support or bug fixes.
- Provide ongoing operations, maintenance, managed services, or break/fix support for any code, tool, or solution after the engagement period concludes.
- Be responsible for resolving outages or implementing mitigations caused by the Customer, its agents, or third parties.
- Provide technical design, consulting, or operational services for non-Google Cloud environments (e.g., on-premises systems, other cloud providers).
- Manage, procure, pay for, or engage in licensing discussions for any third-party software or services.
- Upgrade, patch, or modify any third-party or on-premises system software.
- Perform code or query optimization activities not explicitly defined in the scope of services..
- Design, build, or manage integrations with Customer systems, data sources, or applications unless specifically stated in the SOW.
- Interact with external teams to implement VISION incoming or outgoing integrations.
- Modify the Customer's existing legacy systems or source code.
- Perform formal project management or change management activities on behalf of the Customer.
- Accept work requests, ad hoc changes, or custom development requests from individuals other than the Customer's designated point(s) of contact.
- Require drug testing or additional background investigations for Google personnel.
- Develop detailed migration or failover plans for Customer existing systems.
- Provide any guarantees, warranties, or commitments regarding solution performance, resource efficiency, model accuracy (for AI/ML), or specific quantitative outcomes.
- Develop or deliver formal training materials, end-user "how-to" guides, or custom tutorials beyond the specified knowledge transfer.
- Author or be the final owner of Customer-specific deliverables or internal documentation.
- Provide formal training licenses or instructor-led training for general Google Cloud products.
- Research or provide advice on unsupported product features, custom software, or third-party applications.
- Perform configurations for Customer-wide systems, such as Single Sign-On (SSO), identity providers, or core networking (VPNs, interconnects), unless explicitly scoped.
- Provision, create, or manage Google Cloud projects or billing accounts on behalf of the Customer.

Google will confirm completion of the following Milestones during the delivery of this SOW:

Phase	Milestone	Associated Deliverables*	Percentage of Total Engagement
Phase 1 (Q1)	**M1.1** Infrastructure & Test Planning	● D1 Project Charter ● D2 Weekly Status Reports* ● D3 Project Plan* ● D4 Product Roadmap ● D5 Technical Design Document* ● D6 Infrastructure as Code (IaC) Scripts	9%
	M1.2 Design & Security	● D7 Technical Security Recommendations Document* ● D8 User Interface Designs	9%
	M1.3 Data Platform Architecture **M1.4** Rules Extraction	● D9 Data Architecture Definition Document ● D10 Code Extraction Output	9%
Phase 2 (Q2)	**M2.1** Application, Data & Enablement Artifacts	● D11 Virtual Data Warehouse Configuration ● D12 Integration Code (APIs/Batch) ● D13 Change Management & User Experience Deliverables*	8%
	M2.2 Application, Data & Enablement Artifacts (Cont.)		8%
	M2.3 Application Data & Enablement Artifacts (Cont.)		8%
Phase 3 (Q3)	**M3.1**	● D14 Initial Security Assessment Report	8%

	Security Assessment		
	M3.2 Security Assessment (Cont.)		8%
	M3.3 Testing & Enablement	● D15 Training Artifacts*	8%
Phase 4 (Q4)	**M4.1** Security & Regression Completion	● D6 Infrastructure as Code (IaC) Scripts ● D16 Final Comprehensive Security Review Report	8%
	M4.2 Security & Regression Completion (Cont.)		8%
	M4.3 Final Report Out	● D17 Final Go-Live Report	8%

* Indicates a deliverable that is iterative in nature and that will be ongoing throughout the course of the engagement.

Carahsoft will invoice following completion of a Milestone, in accordance with the above table. Deliverables associated with each Milestone are provided for reference purposes only, and completion of each Deliverable is not necessary prior to Carahsoft invoicing for any relevant Milestone.

Requests for Services or development work outside those outlined in Section 2 or delays in Customer activities as described in Section 5 may result in delays and may increase the amount charged for the work described in this SOW.

3. Deliverables

3.1. **Description of Deliverables.** Google will provide the following Deliverables to the Customer under this SOW:

ID	Deliverable	Description/Acceptance Criteria
D1	Project Charter	A document containing goals, requirements, KPIs, major milestones, and governance procedures.

D2	Weekly Status Report	A document, prepared weekly, outlining progress against project timelines, key risks and issues to be addressed (RAID log), decisions or change requests, and progress on milestones and KPIs.
D3	Project Plan	A document containing milestones, deployment activities, and completion dates of tasks and all specified deliverables.
D4	Product Roadmap	A strategic document that communicates the System vision and direction, focusing on outcomes and modernization recommendations and goals.
D5	Technical Design Document (TDD)	A document containing a detailed design of the technical architecture within Google's scope of work, including an inventory of GCP configuration options, decisions, and recommendations for next steps for the architecture.
D6	Infrastructure as Code (IaC) Scripts	All source code and infrastructure-as-code developed for the environment/solution.
D7	Technical Security Recommendations Document	A document that summarizes leading practices on Vulnerability Management, Ingress/Egress Security, Data Encryption, Access Controls, and Traceability Matrixes.
D8	User Interface Designs	Figma user interface designs, User Workflows in Figma/PDF form, UI Component Library.
D9	Data Architecture Definition Document	A technical document defining the data architecture, data lineage, and strategy for the Virtual Data Warehouse.
D10	Code Extraction Output	Automated reports and data files generated by Google tooling representing the business rules and logic extracted from legacy code.
D11	Virtual Data Warehouse Configuration	Configuration scripts and documentation establishing the Virtual Data Warehouse environment for In-Scope workflows.

D12	Integration Code (APIs/Batch)	The API definitions and batch processing scripts required to support the integrations for In-Scope and Partial Scope workflows.
D13	Change Management & User Experience Deliverables (Documentation)	User journey maps for Core Case Management workflows, Change impact assessment, Stakeholder engagement plan, and Communication templates.
D14	Initial Security Assessment Report	[redacted]
D15	Training Artifacts (Job Aids/User Guide)	A package containing the specific User Guide, Job Aids, and Video Tutorials defined in Workstream 4.
D16	Final Comprehensive Security Review Report	[redacted]
D17	Final Go-Live Report	A summary document detailing the deployment outcome, system status, and transition to Hypercare/Operations.

3.2. Change Requests and Acceptance.

Change Request Process

Either party may request a material modification to the Services in this SOW by submitting a change request to the other party ("Change Request"). Upon receipt of a Change Request, Carahsoft/Google may propose additional Fees and adjustments to delivery dates if the Change Request adds scope, time or team members to the Services. The parties will have ten (10) business days after the Change Request is submitted to agree to amend this SOW, or execute a new SOW, with a change order executed by the parties; otherwise, the Change Request will be considered withdrawn.

Acceptance Process for Deliverables

1. Customer will have three (3) business days ("First Review Period") following receipt of a Deliverable from Google to determine whether the Deliverable meets specific objective conditions described in this SOW ("Acceptance Criteria"). If Customer provides notice of non-conformity in accordance with Section 2 of this Acceptance Process, Customer will have up to two additional review periods of two (2) business days ("Second Review Period") and one (1) business day ("Third Review Period"), as applicable, following receipt of a corrected Deliverable to confirm that the corrected Deliverable meets the applicable Acceptance Criteria.

2. If Customer reasonably determines that a Deliverable does not conform to its Acceptance Criteria, then before the end of the applicable Review Period, Customer will provide written notice to Google describing in detail the nature of the non-conformity. If Customer does not provide notice of acceptance or non-conformity during the applicable Review Period, the Deliverable will be deemed accepted by the Customer.

3. If Customer provides notice of non-conformity in accordance with Section 2 of this Acceptance Process for the First Review Period or Second Review Period, Google will, at no additional cost to the Customer, promptly make any changes reasonably required to correct the non-conformity described in the notice. Google will deliver the corrected Deliverable to the Customer.

4. If Customer provides notice of non-conformity in accordance with Section 2 of this Acceptance Process for the Third Review Period, then unless the Parties agree otherwise in writing, Carahsoft/Google will either, as applicable, (i) reduce any unpaid Fees by the amount due for the non-conforming Deliverable or (ii) return Fees in the amount paid for the non-conforming Deliverable, the portion of the SOW applicable to the Deliverable will terminate, and Customer's license to use the Deliverable will terminate.

4. Proposed Engagement Staffing

Under this SOW, Google may staff the following roles. A team member may perform one or more roles. Google may substitute and change actual team members, depending on schedule and availability.

Role	Role Description
US Based Google Cloud Consultant(s)	Primary point of contact between Customer and Google for the engagement
US Based Google Cloud Engineer(s)	Provides supplemental technical expertise in architectural decisions
US Based Google Cloud Subcontracted Engineer(s)	Provides supplemental technical expertise in architectural decisions
US Based Google Cloud Program Manager(s)	Provides engagement project management

Under this SOW, Customer may assign the following roles to the engagement:

Role	Role Description	Est. FTE	Weekly Time Commitment

Executive Sponsor	Customer executive responsible for all Customer approvals	1	4 hours/month (for ESC meetings)
Program Director (Client)	Customer primary point of contact	1	15-20 hours/week (Primary point of contact)
Empowered CCB Members	Empowered project team members who own the backlog and make rapid scope decisions	2-3	4-6 hours/week (For 2x weekly CCB meetings)
Subject Matter Experts	Provide legacy system expertise (Architects, DBA, Networking, IaM, Integrations), validate processes, and commit to timely decisions.	4-6	5-8 hours/week
Super Users (Validation Cohort)	Real-world users responsible for validation and user acceptance testing.	10-15	10-15 hours/week (During Months 8-10 for guided UAT)
Data Stewards	Crucial role: Must review data hygiene reports from the customer team and make binding decisions on cleansing rules.	2-3	5-10 hours/week (During Months 4-9)
Training & Enablement Team			
Training Lead	Owns all training design and delivery.	1	3-12 hours/week (During Month 8-12)
Instructional Designers	Builds role-based eLearning, job aids.	3-4	6-12 hours/week (During Month 8-12)
Full-Time Trainers	Delivers all training and provides hypercare support.	3-4	9-12 hours/week (During Month 8-12)

Team members staffed under this SOW by Google are not subject to Customer background checks or fingerprinting.

5. Project Requirements, Ongoing Customer Responsibilities, and Assumptions

Customer acknowledges that Google will not perform work in a live production environment. However, Google may process Customer Personal Data, which will be processed exclusively within a Customer-Managed System (both as defined in the CDPA)", whether directly or through its subcontractors. The Cloud Data Processing Addendum available at: https://cloud.google.com/terms/data-processing-addendum/ (the "CDPA") and Section 7 of this SOW will apply to processing of Customer Personal Data by Google Personnel.

PHI Requirements

In order to provide the Services to Customer, Google may be required to view Protected Health Information ("PHI") (as defined in the Health Insurance Portability and Accountability Act of 1996 and modified by the Health Information Technology for Economic and Clinical Health Act). For purposes of this SOW, Services that require Google to access PHI will be considered "Covered Services" in the Business Associate Agreement ("BAA") in effect between Google and Customer, subject to the following:

Google BAA Obligations

1. **Security Measures**: Notwithstanding anything to the contrary in the BAA, Customer acknowledges and agrees that the security of PHI processed for the Services is a shared responsibility and that Google will fulfill its security obligations in the BAA by (1) only accessing PHI by viewing it live (without recording or screenshots), whether in person or remotely, (2) only viewing PHI that is (i) provided by Customer to Google and (ii) hosted in a Customer-controlled Google Cloud Platform account, (2) providing Personnel with security training and training on HIPAA requirements (including HIPAA Privacy Rule, Security Rule, and Breach Notification Rule requirements), (3) requiring Personnel to be under an obligation of confidentiality, and (4) requiring Personnel to take appropriate steps to comply with the security measures.
2. **Audit Rights**: Notwithstanding anything to the contrary in the BAA, Customer acknowledges that Google will only view PHI provided by Customer to Google and hosted in a Customer-controlled GCP account and that Customer's audit rights with respect to PHI processed for the Services are addressed in the form of audit rights for the Google Cloud Platform Covered Services in the BAA. For the Services, Google will also maintain annual certificates for ISO 27001, ISO 27017, ISO 27018 and ISO 27701.
3. Google is not responsible for a Data Incident to the extent caused by Customer's breach of its BAA Obligations described below.
4. For clarity, nothing in these PHI Requirements modifies Google's obligations to Customer for other Covered Services (including with respect to Google Cloud Platform Covered Services) in the BAA.

Customer BAA Obligations

1. Customer will only provide Google with view-only access to PHI that is hosted in a Customer-controlled Google Cloud Platform account solely to the extent necessary for Customer to receive the Services; view-only access may include in-person viewing or ability to view remotely via methods such as video or screen sharing.
2. Customer will only request that Google provide Services for a task that is related to an authorized use of PHI under HIPAA.

Customer will meet all of the following project prerequisites BEFORE Google will start the Services:

- Identify following roles to support the execution of the project:
    - Project sponsor/designee who will review Deliverables and serve as the escalations point to validate timely completion of this engagement.
    - Project lead(s) who will be responsible for reviewing weekly progress with the project team and triaging initial risk and issues, and provide Customer guidance.

    - Point of contact (POC) for each data source identified for the data ingestion pipelines provided for in this SOW to provide permission to use data and advice on proposed usage.
    - POC and Subject Matter Experts (SMEs) to resolve network, connectivity and security dependencies.
    - Technical architect and/or data SME to help take key design decisions while building the data platform.
- Review and validate the initial project timeline provided by Google to align on delivery focus areas.
- Align internally on key metrics and success criteria.
- Provide organizational access to the GCP environment for the implementation of Google Cloud Foundations and other GCP services and components required for this project.
- Provide secure access to data sources required for the execution of this SOW.
- Provide a data classification taxonomy.
- Obtain necessary permissions and access to data sources and data required for the completion of scope of services described in this SOW.
- Ensure Customer-managed integration points (e.g., APIs, IdPs, etc.) are stable, documented, and available for Google's development and testing activities according to the project schedule.
- Validate the API connectivity for required external data sources that will be leveraged to meet business requirements and will be accessible to the Google team.
- Provide access to an established code repository service.
- Procure any necessary Google Products such as Google Security Command Center Enterprise, Google SecOps Enterprise, Assured Workloads, Google Chrome Enterprise Premium, and Google Cloud Care Premium Support.

Customer will perform the following ONGOING activities during the engagement:

- Maintain a direct relationship with Administration for Children and Families (ACF) reviewers and federal oversight partners.
- Manage external relationships and provide information to the development team.
- Coordinate reviews with IV&V vendors and provide access to Google deliverables and personnel.
- Approve compliance documentation (e.g., SSP, PIA, SCA) with Google support as input authors.
- Complete security reviews within 5 business days.
- Provide existing compliance artifacts.
- Lead audit activities and provide requested documentation.
- Accept or mitigate identified risks within agreed timeframes.
- Identify which logs must be retained for audit/compliance purposes.
- Define data classification levels and associated compliance and protection policies.
- Make available dedicated personnel who will be present throughout the project's lifecycle and who are consistently engaged and fully empowered to make timely decisions.
    - Business decision feedback to Google inquiries would be received ideally within one (1) business day, but no later than three (3) business days.
    - If no response is provided within three (3) business days for feedback or non-deliverable artifact approval, and no extension for time to review is received, inquiries by Google to the Customer will be assumed to be approved by the Customer.
- Provide appropriate SMEs to participate in architecture, network, access, security, and operations workshops and design activities.
    - SMEs feedback to Google inquiries would be received ideally within two (2) business days, but no later than three (3) business days.
    - If no response is provided for feedback or non-deliverable artifact approval within three (3) business days, and no extension for time to review is received, inquiries by Google to the Customer will be assumed to be approved by the Customer.
- Provide adequate resources including Data Owners (decision makers), data SMEs, and allow Google to serve as formal technical custodians until the Customer takes formal technical ownership of the System.

- Provide timely decisions on data platform and/or data pipeline requirements, architecture designs and/or actions pertaining to project blockers or dependencies.
- Facilitate communications with the third-party vendors as needed.
- Perform UAT on the data pipelines and the dashboards developed by Google and share feedback.
- Dedicate personnel with the requisite skills, experience, and qualifications to the engagement and delivery of the System.
- Identify and name decision-makers for business and technical accountability to include product managers, engineering leads, and necessary stakeholders.
- Provide a list of stakeholders with existing relationships and forums that Google can continuously engage with during the lifecycle of the project.
- Identify user groups and pre-existing relationships to conduct user interviews.
- Provide resources to support user adoption, knowledge transfer, and communications efforts.
- Provide documentation for current data models, schemas, and mapping as available.
- Provide Google the ability to run change data capture from the pre-existing data warehouse.
- Provide Google the ability to conduct bulk data extraction from pre-existing data warehouses.
- [redacted]
- Own source system data validation, approvals, and decision timelines.
- Verify test data represents all required case types, edge cases, and high-risk scenarios.
- Provide mapping logic for derived fields, calculated indicators, and any business rules that generate reportable data elements from raw values.
- Validate mappings and transformation rules between legacy (FACS) and new module data models.
- Make changes to related data integration mechanisms as required.
- Support Google in understanding legacy mainframe data structures, including field usage, conditionals, derived values, and undocumented behaviors.
- Process invoices within 30 days.
- Verify billing accounts and quota allocations are in place for all environments.

The effort estimation and pricing for the work scoped in this SOW is predicated upon the following assumptions. Any changes to these assumptions provided by Customer may impact the scoped pricing or schedule and result in a Change Request.

General Assumptions

- Project funding is secured for all the provided requirements supporting the project timeframe.
- Required software, services, or tooling is available and usable within three (3) weeks of the initial request.
- The project schedule does not account for delays caused by third-party vendor performance.
- Timely completion of activities and decisions by third-party vendors or other government agencies not under Google's direct control are critical to the project schedule.
- Any third-party reviews that prevent or delay deployment of the solution may limit or prevent Google's ability to complete its scope of work.
- Any Customer-furnished equipment, data, or software will be available when required and in proper working order.
- The Customer will be responsible for managing and ensuring the timely performance of any third-party vendors or systems (e.g., other state agencies, external data source providers) that the VISION application must integrate with.
- Key Customer Subject Matter Experts (SMEs) and stakeholders will be made available for workshops and decision-making within forty-eight (48) hours of a request. Delays in SME availability will directly impact the project schedule.

- UAT testing should include any accessibility testing requirements the Customer may have as Google does not provide these requirements.
- The Customer owns all existing code for the in-scope modules and will provide it to Google within five (5) business days upon request.
- The Customer and Google will agree on in-scope documentation code in Phase 1 to define requirements and functionality specifications.
- The Customer and Google will agree on integrations, data, business rules, and required functionality based on documentation and systems review outputs.
- The twelve (12)month timeline assumes high technical complexity. Google and the Customer will review the findings during Phase 1 activities. If the complexity is found to be significantly higher than anticipated, Google and Customer will work together to prioritize and adjust project scope to remain within the established budget and timeline.
- Google is in compliance with the certifications on SAM.gov.

Generative AI Assumptions

- Google may use Generative AI technology (e.g., Gemini) to provide content that may form part of the project and associated Deliverables; all AI-generated content will be reviewed by Google for accuracy prior to submission.
- English is the only language in which documents will be ingested, classified, or extracted by AI services.
- Google will leverage Google AI services first, and will notify the Customer if third-party tooling is recommended for purchase.

Support Assumptions

- Google Premium Support is made available to the Customer through a separate GCP agreement.
- Following the implementation of the VISION application, the Customer will directly contract with a service provider of their choice for ongoing maintenance and operations.

Schedule Assumptions

- The project schedule will account for Customer-specified holiday schedules and IT system freeze/blackout periods.
- Provide time and personnel availability for the following workstream activities:
    - Business Context and Requirement Knowledge Transfer under Workstream 1: Five (5) ninety (90) minute sessions to review existing data dictionaries, diagrams, source-to-target mapping documents.
    - User Interface Design under Workstream 1:
        - Three (3) sixty (60) minute sessions to review existing designs.
        - Up to five (5) sixty (60) minute sessions, as determined by Google, to gather stakeholder feedback on designs.

Data Assumptions

- The quality, availability, and timeliness of data provided by the Customer from source systems are the responsibility of the Customer.
- Google will have access to the database schemas in use by the application.
- All necessary data sharing agreements will be in place no later than one (1) month after the Project Kick Off.
- Google will have the ability to run bulk-load or change data capture from the pre-existing data warehouse.

Technical Assumptions

- Responsibility for the functionality and compatibility of any systems external to Google Cloud that integrate with the solution rests solely with the Customer.

- Integrations will be refined and agreed upon with the Customer in Phase 1 once business rules have been extracted and prioritize scope to remain within the timeline.

Compliance and Security Assumptions

- Google assumes that the Customer has existing compliance personnel for designated environment(s).
- The Customer will support the use of Google Cloud Assured Workloads for CCWIS regulated environments.
- The Customer is responsible for the overall authoring, accuracy, completeness, and timely submission of all compliance documents (e.g., System Security Plan, Security Control Assessment, BC/DR Plan, APD updates) to the Administration for Children and Families (ACF). Google's role is limited to providing supporting technical artifacts for the in-scope Google Cloud components.
- The Customer will define the authoritative roles, role groupings, and least privilege expectations to support Identity and Access Management policies.
- Google shall have no obligation under this Statement of Work (SOW) to conduct accessibility testing (such as against Section 508 or WCAG standards) or to develop, provide, or deliver any documentation or artifacts demonstrating accessibility compliance for any components or services delivered hereunder. This exclusion applies to all Google deliverables, including any user interface components that may be within the scope of this SOW.

Commercial and Financial Assumptions

- Resources:
  - Customer will provide the following resources:
    - Dedicated Project Manager: Assign full-time PM for duration of engagement
    - Subject Matter Experts: Provide FACS/JARVIS SMEs, etc. as needed
    - Business Stakeholders: Verify stakeholder availability for requirements sessions
    - Technical Resources: Provide security, network, and infrastructure resources as needed
    - Training Champions: Identify training champions from each service area
- Contractual Scope Governance:
  - Any additional work required to support changes in scope, newly discovered compliance requirements, undocumented legacy system behaviors, or materially different technical conditions will be addressed via a mutually agreed-upon change order.
  - The activities and deliverables described in this Statement of Work are scoped for the Core Case Management module and foundational infrastructure required for all modules.
- Technology:
  - Purchase and maintain an active license to use the requisite Security Command Center Premium and Assured Workloads products.
  - Any new Google Cloud products or features released during the course of the engagement will be reviewed for applicability and suitability. Google does not guarantee inclusion of features that are not generally available (GA) at project start.

Infrastructure and Environment Assumptions

- Google will not have direct access to the Customer's production Google Cloud environment or mainframe systems.
- Google will proceed with the recommended path forward to maintain delivery momentum, in the absence of formal client direction within the designated timeframes.

Checkpoints will be conducted on a weekly basis during the engagement to reconfirm the assumptions.

6. Fees

Pricing will be addressed in the Carahsoft Quote.

7. Additional Security Measures

In addition to the obligations contained in the Cloud Data Processing Addendum (CDPA), the Partner will ensure Customer agrees to the following additional security measures:

- During onboarding, Google will notify Personnel performing the Services subject to the CDPA ("CDPA Personnel") that they will be processing Customer Personal Data (as defined in the CDPA).
- Google will remind CDPA Personnel of their confidentiality obligations and that Customer Personal Data may only be used to provide the Services described in this SOW.
- Google will only access and process Customer Personal Data in a Customer-Managed System (as defined in the CDPA).
- Google may process the following types of Customer Personal Data for the purpose of performing the Services in this SOW:
    - To be determined based on Customer personal data accessed.

Execution. In consideration of the mutual covenants set forth above and for other good and valuable consideration, the receipt, adequacy and legal sufficiency of which are hereby acknowledged, the parties have entered into the above Statement of Work and have caused their duly authorized representatives to execute this SOW.
